Marcel Rapold | Application for BAS Secretary

- ฿ Bitcoin-Only, Lightning, Nostr
- ฿ Over 15 years of experience in IT development, CV
- ฿ Currently IT Project Manager at Zürcher Verkehrsverbund (ZVV)
- ฿ Focus on digital transformation and process optimization
- ฿ Business Informatics, MAS in Digital Business, EMBA (2025)
- ฿ Lives in Erlenbach ZH, father of Xavier (17 years old)
- ฿ German (native), English (business), Spanish (native)

Dear Members of the Bitcoin Association Switzerland,

#storytime
Bitcoin entered my life in 2017, and since 2020 I have been fully dedicated to this ecosystem. My work focuses on decentralized systems such as the Lightning Network and the Nostr protocol. In doing so, I maintain close exchanges with international Bitcoin enthusiasts.

#skillset
I am a man of action, not a politician. My strengths lie in ideation and implementation, supported by solid IT and project management experience. My professional career began as an application developer and led me to my current position as IT Project Manager at Zürcher Verkehrsverbund (ZVV). There, I experience the Cantillon effect firsthand, while placing great importance on the responsible use of taxpayer money. At the same time, I advocate for “orange-pilling” government-related organizations and making them more efficient. **This independence from the crypto world allows me to pursue my Bitcoin-only convictions without compromise.**

#education
With an academic foundation in Business Informatics and a MAS in Digital Business, I am currently on the path to deepening my leadership skills through an EMBA at HWZ, which I will complete in 2025.

#mindset
My goal for BAS is clear: **The consistent alignment as a Bitcoin-only association** to further strengthen credibility and influence. The association must clearly distance itself from centralized cryptocurrencies and profit-driven crypto companies.

#vision
As Secretary, in 2023, I worked on structuring and making all protocols publicly accessible, developing workflows for member onboarding, and securing BAS funds through a modern multisig setup. Additionally, I laid the foundation for establishing a Lightning Network (LN) BAS node.

#mission
Efficient communication and process automation are my trademarks. I see my role as IT Project Manager as a bridge between technical and business worlds, which is also crucial in BAS. The clear positioning as a Bitcoin-only association is, in my opinion, the key to BAS’s future.

#commitment
In conclusion, I want to emphasize that I have not only actively contributed to sharpening the Orange Vision but also firmly stand behind the values embodied in this manifesto. **I support all other candidates for the BAS board who share this vision and are ready to move forward with the same conviction and passion.**

Best regards,
Marcel Rapold

“THE ORANGE VISION”

FOR BAS, BY DEZENTRALSCHWEIZ

The Bitcoin Association Switzerland (BAS) aims to become a nationally recognized authority for politics, media, and business in the field of Bitcoin. As a role model for other Bitcoin organizations, we seek to develop a transferable framework. At the same time, we see ourselves as an integral part of the Swiss Bitcoin community, which we aim to strengthen through cooperation, exchange, and mutual support.

MISSION STATEMENT

Our mission is to bring Swiss citizens closer to the potential of Bitcoin, as well as associated privacy and P2P technologies. We guide existing and new members on their Bitcoin journey through regular events. As a community, we stand united in support of Bitcoin and its principles. Our mission is to make Switzerland a beacon of Bitcoin adoption and innovation. Through regular events, consistent education, and dedicated regulatory advice, we aim to make Switzerland a global Bitcoin powerhouse.

STRATEGIC GOALS

- **Reformulation Of The Association's Statutes**
  Update and reformulate the statutes focusing on Bitcoin and its ethos.
- **Operation Of A Lightning Network Node**
  Provide liquidity for the community and the Bitcoin Network through Lightning channels.
- **Promotion Of The Swiss Bitcoin Ecosystem**
  Support Bitcoin community projects and local events to strengthen the Bitcoin ecosystem in Switzerland.
- **Modernization Of Membership Fees**
  Transition to Lightning payments for greater efficiency and privacy.
- **Strengthening The Association Community**
  Organize regular meetups, events, and lectures.
  Support member Initiatives that align with the association's goals.
- **Optimization of Internal Asset Management**
  Implement a multi-signature structure for enhanced security and transparency. Introduce a streamlined process that allows both board members and individual BAS members to propose projects and activities for treasury support. These proposals will then be voted on by the membership.

CORE VALUES

- Exclusive focus on Bitcoin
- Promotion of the local Bitcoin scene
- Protection and promotion of freedom of speech and privacy
- Integrity and transparency in all activities

Transparency regarding the background of board members is crucial for BAS and its current and future members. To build and maintain trust within the community, it is essential that any potential conflicts of interest, particularly ties to blockchain or cryptocurrency projects, are fully disclosed. This openness not only reinforces the integrity of the organization but also bolsters its credibility with members and external partners.

Through this realignment, the Bitcoin Association Switzerland positions itself as a forward-looking, responsible, and community-oriented organization within the Swiss and international Bitcoin ecosystem.

Lightning
Bitcoin

- Business IT alignment for internal synchronization of process and service management
- Stakeholder management to optimize communication processes in projects
- Budget and contract responsibility Operation and Further development of the website zvv.ch
- Other project-related competencies and responsibilities (costs, time, quality)

Digital Innovation Consultant @ TeleLocher AG

January 2019 - December 2021

- Planning and execution of a digital multi-channel strategy
- Support of the operative business in integration of sophisticated Smart Home solutions.
- Planning and implementation of ICT multimedia solutions for corporate clients.

Co-Founder | Information Officer @ ALPA.one

March 2018 - present

- Strategic planning in IT project development
- Continuous improvement of business efficiency.
- Focus on innovation management to improve the product.

Head of Web Development @ WebComTV AG

January 2014 - March 2016

Project Management

- Project management based on the AGILE/SCRUM and Waterfall methods
- Preparation of structural planning, preparation of cost estimates
- Preparation of schedule, resource and financial planning
- Recording, assessing and mitigating risks

Requirements Engineering

- Business analysis for the planning and development of complex customer projects
- Creation of specifications with clearly defined customer acceptance criterias (functional and non functional requirements)

Analysis & Design

- Creation of specifications (application and system architecture, SW requirements specification)
- Creation of Prototypes and Proof of Concepts
- Object-oriented analysis and design using UML
- Create ERM, class and sequence diagrams

Programming

- Create HTML5 templates from a graphical template using the bootstrap framework
- Front-End UI design and implementation on jQuery and CSS3 basis
- Object-oriented programming using Javascript and PHP
- SQL database modeling and implementation
- CMS module programming for Contao, Typo3 and WordPress
- Realization of HTML-5 animations with Adobe Edge

Testing/Customer acceptance

- Execution of module tests as well as integration, system and user (customer acceptance) tests

Key Account Management

- Recording of requirements
- Presentation of proposals/solutions
- Preparation of offers
- Development of social media concepts

Web-Developer @ signorell GmbH

June 2010 - December 2013

- Development of websites, iPad and Facebook applications
- SW Lifecycle: requirements capture, design, implementation, testing and documentation
- Definition of new functions with customers for websites and their implementation
- Maintenance of documentation (requirements analysis, data models, software code)
- Post-production workflow - creation and optimization in the field of film production
- Workflow optimizations in the areas of data storage, data processing and data archiving for film productions
- Ensuring data security and integrity during film production (D-IT)
- Technical planning and installation of LiveStreaming events including their integration into web applications
- Installing and configuring the NAS backup infrastructure
- Support of the internal SAN network, as well as backup and outsourcing of production material using tape library

IT Service Center Manager @ Tele Locher AG

Januar 2007 - Juni 2010

- Planning and construction of individual PC systems
- IT consulting for private and corporate clients
- Development of customer-specific software solutions in the area of security and network
- Planning and development of company networks
- Installation and configuration of servers (Wintel, Linux)
- Audio and video installations
- Corporate design for customers (logos, V-cards, signatures and web pages)
- Planning, conception and realisation of the company website of Tele Locher AG

Service & Support Agent @ Mister Q AG

May 2007 - August 2008
